- The next steps
- What I would like my future project to be like?

What I enjoyed the most?

The thing I enjoyed the most was meeting Neil Armstrong and going to the council house to debate our project question. Another thing I enjoyed was the coffee afternoon because we got to share our learning with our parents. Most of all I enjoyed holding the animals.

What could be improved?

In my opinion I think that the things that could be improved are: we get more trips; we could debate other schools and getting samples of different things from space. We could do this by earning more money by inviting parents in more often; skype or going to meet other schools and asking NASA to borrow their gadgets.

The next steps

The next steps are:

- To communicate with other schools and involve them in the debate so other pupils get the experience
- Have some more important people there so that our trips may be put in newspapers or on the internet
- More pupils and staff so younger years can join in
- An audience to join in and give their opinion that someone else might not have thought and make lots of people change their mind

What I would like my future project to be like?

From my point of I would like my future project to include fun trips, more visitors and more days when you do the learning all day. This would improve our learning by helping us focus more.
